Fused silica transmission grating technology enables high resolution, high efficiency gratings that are ideal for compact spectrometers

Transmission gratings from Ibsen build on leadership in fused silica transmission grating technology. The superior performance of holography, combined with wafer-based Holostepper™ processing, makes possible high resolution, high efficiency, low noise gratings at the cost level of traditional reflection gratings.

Each Ibsen grating is a holographic masterpiece - not a replica. Fused silica grating technology is equally suitable for UV, VIS and NIR wavelength regions.

Spectrometer Grating

966 l/mm for 475 – 1100 nm
FSTG-XSNIR966-910
966 l/mm for 475 – 1100 nm
FSTG-XSNIR966-910

Benefits

- High diffraction efficiency combined with high dispersion
- Low polarization dependence over broad spectral range
- Unbeatable temperature and environmental tolerance
- Transmission configuration offers flexible and tolerant design
- Low stray light and low wavefront distortion

Parameter | Specification
---|---
Materials | Fused silica and high-power, dielectric AR coating materials
Grating area | 4 mm x 4 mm
Chip size | 5 mm x 7 mm
Chip thickness | 0.625 mm
Grating resolution | 966 l/mm
Dispersion at 800 nm | 0.063 deg/nm
Angle of incidence (AOI) | 17 deg
Illumination bandwidth | 475 – 1100 nm
Diffraction efficiency, unpolarized | >40%, all wavelengths
Coefficient of thermal expansion (CTE) | 0.5 ppm/K
Maximum operating tempature | >500 degrees C
Cleaning recommendation | First contact. Available from Photonic Cleaning

Typical grating performance

966 l/mm for 450-1100 nm
Specifications are subject to change without notice.

The above grating is an example of Ibsen's capabilities. Ibsen operates as grating partner for our customers, from being an integrated part of the grating and device / instrument design phase, to the manufacturing of prototypes, to volume manufacturing of OEM gratings.
